Free Software Movement

Session on Android App Development and Testing

14/09/2015

The first session on Android application development was conducted on 12th September 2015. The session was taken by **Mr.G.Srikanth,** SDET Engineer from UTC. Around 30 students from III year of Information Technology participated. The session started with **Mr.G.Srikanth** giving introduction on android and explaining its architecture and structure. The students were then given a briefing about the topics required to build an android application. The first half of the session went on for upto 2 hours. The students also learnt how to develop a simple android application.

The second session was on software testing which was taken by **Mr. Jnaneshwar,** Senior Engineer from UTC. This session was all about acquainting the students with the concepts of software testing and its methodologies. Students were introduced with software testing automation tool for applications - Appium.

The session included the introduction of both development and testing of an android application which has created limitless interest and paved a path for android learning.
