

GokarajuRangaraju Institute of Engineering and Technology (Autonomous)

Report of the Event

Title of the Event: Workshop on Wordpress

Organized Date: 3rd August 2016

Faculty: S RENUKA, ASPIRE CLUB,GRIET

Summary:

WordPress is a free and open-source content management system (CMS) based on PHP and MySQL.^[4] To function, WordPress has to be installed on a web server, which would either be part of an Internet hosting service or a network host in its own right. An example of the first scenario may be a service like WordPress.com, and the second case could be a computer running the software package WordPress.org.^[5] A local computer may be used for single-user testing and learning purposes. Features include a plugin architecture and a template system. WordPress is used by 30.6% of the top 10 million websites as of April 2018.^{[6][7]} As such, WordPress is the most popular website management or blogging system in use on the Web,^[8] supporting more than 60 million websites.^[9] WordPress has also been used for other application domains such as pervasive display systems (PDS).
